RiskTree®

DATA-DRIVEN RISK ANALYSIS

Transforming your complex risks
into clear understanding.

2T Security

RiskTree®

Agile risk analysis

Do you struggle with...

Understanding and assessing risk in your business?

Tying risks and **vulnerabilities** to business applications?

Maintaining a positive and clear risk management policy that enables your enterprise to **thrive**?

Adjusting risk measures to reflect current threats?

Reporting risk in a way that is clear and actionable?

Deciphering complex external risk reports?

Risk reports that fail to keep pace with threats?

RiskTree® can help

RiskTree is different. It provides fast, effective risk analysis putting you in control.

Whether you manage risk in the public sector, enterprise, or as an independent security consultant – RiskTree has everything you need to provide your organisation with a total understanding of risk.
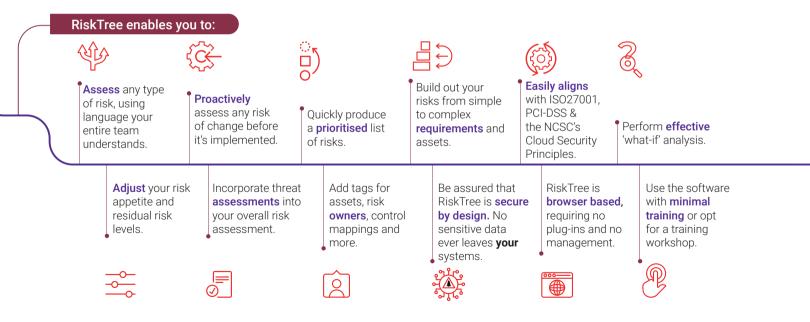

2T Security

What is RiskTree®

RiskTree is a smart new SaaS tool for analysing risk. It provides a systematic model for identifying how your assets could be attacked, quantifies those threats, and enables you to prioritise risks quickly.

But that's not all. RiskTree also shows you how risks will change once you implement controls, so you can make informed decisions about risk mitigation strategies now and in the future.

And, with clear reporting, risk can be seen and understood by everyone.

RiskTree enables you to:

Assess any type of risk, using language your entire team understands.

Proactively assess any risk of change before it's implemented.

Quickly produce a **prioritised** list of risks.

Build out your risks from simple to complex **requirements** and assets.

Easily aligns with ISO27001, PCI-DSS & the NCSC's Cloud Security Principles.

Perform **effective** 'what-if' analysis.

Adjust your risk appetite and residual risk levels.

Incorporate threat **assessments** into your overall risk assessment.

Add tags for assets, risk **owners**, control mappings and more.

Be assured that RiskTree is **secure by design.** No sensitive data ever leaves **your** systems.

RiskTree is **browser based,** requiring no plug-ins and no management.

Use the software with **minimal training** or opt for a training workshop.

RiskTree® business impact

Provide senior leaders with a top-down, strategic perspective of your organisation's risks and uncover vulnerabilities, so you can mitigate risks before they become costly incidents.

- RiskTree delivers an instant, commercial view of risk.

- RiskTree ensures a clear and robust risk management policy can be built and maintained.

- RiskTree identifies where resources are most effective at mitigating risk.

RiskTree Process

RiskTree uses a structured approach to create a risk assessment report that shows where controls are needed to provide the most effective risk mitigation.

Identify
all types of risk from every part of the business, and capture them using RiskTree software.

Assess
your risks through a set of criteria and capture the evidence to support the decisions made.

Prioritise
your risks by impact, quantifying the business value of each. Countermeasures can be applied and their effects on residual risk shown.

Report
on your risks to one or more systems or assets using the customisable RiskTree reporting software.
